

Ionization Kits

Package Description

The iAIRE ionization kit provides a field installation kit for packaged and split systems. This allows you to provide ionization in new or existing units.

For the tonnage selected, the kits include the optimal amount of ionization devices, mounting brackets, VOC sensor and transformers*. The VOC sensor provides feedback with a contact closure to ensure that your ionization is always working.

*Note: A transformer is required with 4 or more Ion devices.

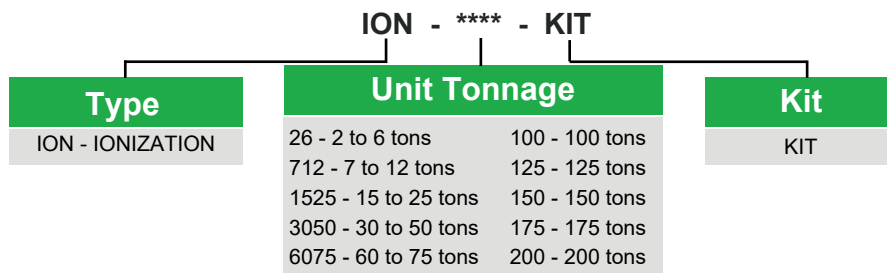

UL 867
UL 2998
CSA C22.2
