

REVOLUTIONIZING INDOOR CLIMATE CONTROL

iAIRE Introduces intraCOOL: New Fully Indoor HVAC System!

July 21, 2025

Dear iAIRE Distributors,

iAIRE is proud to unveil an innovative HVAC solution that is changing the way we think about air conditioning in residential and specialty spaces. Designed with flexibility, efficiency, and unique use cases in mind, our newest system allows **both the air handling unit and the condensing unit to be installed entirely indoors**—a significant departure from traditional HVAC setups.

A Smarter Way to Cool Indoor Spaces

The new system is engineered with versatility at its core. The **air handling unit (AHU)** is designed for installation anywhere indoors, including the garage, while the **condensing unit** can be installed in a variety of indoor locations including the **attic, basement, or the interior of the garage** itself. The only requirement is that the unit must be in a space where **air can be piped in and out**, enabling the system to draw outdoor air, cycle it through the condensing unit, and expel it back outside.

This configuration not only eliminates the need for exposed outdoor condensing units but also allows homeowners and property managers to maintain clean, climate-controlled indoor environments without compromising exterior aesthetics or exposing equipment to harsh weather conditions.

Efficiency Meets Practicality

The condensing unit used in this system already meets established efficiency standards, ensuring reliable performance while minimizing energy consumption. By moving traditionally outdoor components inside, the system also benefits from more stable operating conditions, which can enhance both **longevity** and **reliability**.

Ideal for Vacation Homes and Climate-Sensitive Storage

While the system is versatile enough for a range of applications, it's currently making a significant impact in **vacation homes located in warm climates**, particularly those with **garage spaces used for vehicle and equipment storage**. For seasonal homeowners, garages can reach dangerously high temperatures during prolonged absences, putting valuable items at risk.

iAIRE's intraCOOL indoor HVAC system offers a reliable solution for keeping these areas cool and protected year-round—even when no one is home. This is especially critical for safeguarding high-value automobiles, recreational gear, and other heat-sensitive materials.

Why Indoor Matters

- **Aesthetics:** No outdoor condenser means cleaner exterior lines and no noise outside the home.
- **Protection:** Indoor installation reduces wear from weather and debris, cutting down on maintenance.
- **Flexibility:** Install where it makes the most sense—attic, basement, garage interior, or any indoor area with suitable airflow access.

Looking Ahead

As demand grows for smarter, more adaptable HVAC systems, iAIRE is proud to be at the forefront of engineering solutions for emerging challenges. Whether you're a homeowner, property manager, or HVAC professional, our new intraCOOL fully-indoor HVAC system opens the door to **more installation options, better protection, and unmatched versatility**.
